

Quotation Management System

Monday, November 15, 2021 2:47 PM

Diff PIC

Problem Statements

Speed

Manual approach processes quotation and creates reports much slower than systems. Calculations are done manually in manual approach, maximizing errors and decreasing efficiency.

Backup

All quotation cannot be saved and backed up, in case of fire or other disaster. Need to make copies of all quotation and inefficient process.

Lack of security

Experience shows unauthorized people can easily gain access to the filing room.

Duplication of data

It is common to duplicate this data to make it easy to accessible to all authorized users. The challenge comes in when the same data needs to be updated

Data inconsistency

Due to the duplication of data, it is very common to update data in one file and not update the other files.
